L41 ANSWER 1 OF 7 CAPLUS COPYRIGHT 2004 ACS on STN

AB The melanocortin-1 receptor (MC-1R) is a G-protein-coupled receptor involved in inflammation and skin pigmentation. Compound 2 is the first highly potent and selective MC-1R small-mol. agonist reported. Compound 2 showed efficacy in an acute model of inflammation, which has demonstrated the role of MC-1R in modulation of inflammation.

AB Bombesin receptor antagonists are possible therapeutic agents due to their ability to act as inhibitors of cellular proliferation. On the basis of our hypothesis on the mechanism of action of gastrin associating an activating enzyme system to the receptor and on the results reported in the literature, we have synthesized bombesin analogs which have been modified in the C-terminal Leu13-Leu14 amide part. We have shown that modification in the C-terminal part of the bombesin strongly affected the biol. activity in rat pancreatic acini. The most potent compound which is described here, H-D-Phe-Gln-Trp-Ala-Val-Gly-His-Leu-ψ(CH<sub>2</sub>)Leu-NH<sub>2</sub>, was able to recognize the bombesin receptor on rat pancreatic acini (K<sub>i</sub> 4.3 nM) and antagonized the bombesin stimulated amylase secretion (K<sub>i</sub> 7.7 nM).

L45 ANSWER 3 OF 3 CAPLUS COPYRIGHT 2004 ACS on STN

AB Several new analogs of the known thrombin inhibitor NAPAP were synthesized, in which the P2 glycine residue was substituted by natural and unnatural amino acids. The thrombin inhibitory potency was comparable to that of NAPAP. Several of the compds. had inhibition consts. lower than 10nM and a very high selectivity compared to trypsin, factor  $\chi$ a and plasmin. In addition, analogs were prepared by alkylation of the N $\alpha$ -atom of the 4-amidinophenylalanine in P1 position, which showed a more than 10-fold lower thrombin inhibition. Furthermore, aza-glycine was introduced instead of P2 glycine. For most of the inhibitors similar fast elimination rates were seen in rats after i.v. dosing, as found previously for NAPAP. Only some compds., which contained a second basic group showed a slightly decreased cumulative biliary clearance.

L53 ANSWER 1 OF 2 USPATFULL on STN

AB The present invention is directed to certain piperidines, pyrrolidines, and hexahydro-1H-azepines of the general structural formula: ##STR1## wherein B is selected from: ##STR2## and R.sup.1, R.sup.1a, R.sup.2a, R.sup.3a, R.sup.3b, R.sup.4, R.sup.4a, R.sup.4b, R.sup.4c, R.sup.5, D, X, Y, n, x and y are as defined herein. These compounds promote the release of growth hormone in humans and animals. This property can be utilized to promote the growth of food animals to render the production of edible meat products more efficient, and in humans, to treat physiological or medical conditions characterized by a deficiency in growth hormone secretion, such as short stature in growth hormone deficient children, and to treat medical conditions which are improved by the anabolic effects of growth hormone. Growth hormone releasing compositions containing such compounds as the active ingredient thereof are also disclosed.
